

AI in Urban Planning: A Coastal City Study

Abstract: This research investigates the efficiency of AI-driven urban planning in coastal cities...

Introduction: The rapid urbanization of coastal regions has led to severe environmental stressors...

Methodology: A comparative study was conducted across 10 cities using satellite imagery and AI-based heat mapping...

Results: The findings indicate that cities utilizing AI-optimized green corridors saw a 15% reduction in peak heat...

Discussion: While the results are promising, the study highlights a significant gap in data for low-income suburbs...

Conclusion: A hybrid approach combining AI data with community-led planning is recommended.
